D Sicherheitshinweise

0 Achtung! Vor Beginn der Arbeiten die Netzleitung (230V) spannungsfrei machen. Sicherung auschalten
1 Montage und Wartungsarbeiten dürfen nur von einem Elektrofachkraft gemäß den örtlichen Sicherheitsvorschriften ausgeführt werden.

2 Vor dem Bohren der Befestigungsschrauben auf die Leitungen der Netzleitung achten, um diese nicht zu beschädigen.

3 Litzenröhre darf nicht verletzt werden, Aderehdüsen verwenden.

4 Alle elektrischen Verbindungen müssen fest angeschlagen und vollständig eingekettet werden (auch bei vormontierten Leuchten), um den hohen Stromen ein guter Kontakt Voraussetzung für eine lange Lebensdauer ist. Auf Feste Verbindung muss sicherstellen, dass sie nicht abrutschen.

5 Falls die Anlage gedimmt werden soll, bitte einen Dimmer für Niedervoltanlagen benutzen (Phasenabschnittdimmer). Zu lange gelinderte Halogenlampen werden auf Full output from time to time. Noises which occur while dimming are inherent to the system.

5b If the system is to be dimmed, please use a dimmer designed for electronic equipment (phasedimmer).

Halogen bulbs which are dimmed for too long will darken over time, reducing their useful life. Switch them to full output from time to time. Noises which occur while dimming are inherent to the system.

6 Do not fit any items (e.g., for decorative purposes) which do not form part of the system's supply scope.

7 The bulbs become very hot during operation. Do not touch until they have cooled down.

8 Do not change light heads or bulbs while switched on.

9 A minimum distance from the surface being illuminated must be maintained (fire risk).

10 The system must not be expanded to include additional lights.

11 The maximum permissible ambient temperature is 30°C.

12 Short circuits and overloads must be avoided (to many connected bulbs or incorrect bulb output), since the system will be shut down in the event of the thermal switch or thermal fuse reacting. Disconnect the power pack or thermal switch from the mains power supply and allow to cool down for one hour.

13 Power packs with thermal fuses may be damaged by overloading. Power packs with defective thermal fuses are not covered by the guarantee!

14 If using a power pack with integrated fine fuse, check it in the event of system failure. When replacing fuses, please only use delayed-action fuses with the same fuse figure (see power pack for details).

15 The user manual supplied by the manufacturer must be read to ensure proper use. Retain the fitting instructions! Always pay attention to the technical data shown on the product. We reserve the right to make technical changes.

16 The power pack must be fitted separately.

17 The light / power pack must not come into contact with heat insulation. The distance between the power pack and the illuminant must be at least 30 cm to avoid heat feedback. Overheating risk! There must be sufficient ventilation and venting.

18 Before fitting, consult the cabinetmaker or panel manufacturer to ensure that the materials are suitable for a surface temperature of 90°C.

19 Before fitting to the voltage figure shown on the power pack, Only suitable for supplying low voltage bulbs with power.

20 Only fit on non-conductive surfaces.

21 Before fitting, consult the cabinetmaker or panel manufacturer to ensure that the materials are suitable for a surface temperature of 90°C.

22 The maximum output of the power pack must be observed when changing bulbs or extending the lighting system.

23 Supporting conductors for different low voltage systems must be fitted in such a way that they cannot come into contact with each other.

24 The protection class of the power pack must be I.

25 IPxx: The IP safety rating at the fitting location must be observed.

26 Any broken front glass must be replaced immediately. Damaged lights should only be repaired using original spare parts.

27 Damaged lights (e.g. glass elements, seals etc.) should only be repaired using original spare parts.

28 Power cable: In case the power cable is damaged, the item becomes unusable.

29 Care information for matt chrome. In the event of surface dirt, switch off the light. Put a few drops of sewing machine oil or a little vaseline on a soft cloth and wipe of the dirt once the light has cooled down. Caution: oil must not get inside the luminaire.
